

N55 DRUM & PALLET SYSTEM DELIVERS NEW “ABILITIES”^{TO THE} FOOD PACKAGING INDUSTRY **FOOD**

STACKABILITY...The N55FPS was designed specifically so the N55 drum nests securely in the N55 pallet instead of on it. Additionally, the underside of the N55 Pallet interlocks with the four drums on the pallet below. Both the N55 drums and pallets nest inside of each other when not in use, for simple, compact storage and warehouse space savings.

DURABILITY...Formed out of heavy duty plastic, the N55FPS doesn't crack or break and protects the drum's contents from shocks and impacts during shipments. The durable plastic eliminates problems with weathering, corrosion and denting, making it ideal for outside storage.

RELIABILITY...Made from non-porous HDPE resin, the N55FPS offers clean and safe storage for the food packaging industry. The plastic construction makes it the preferred material type for food processing and storage environments as well as international shipping.

STABILITY...The N55 Drum & Pallet Packaging System provides proper restraint for greater stability during transport. Throughout the shipping process, the N55 Packaging System keeps drums balanced and prevents against tipping during sudden turns, shifts and grade changes.

ENVIRONMENTAL RESPONSIBILITY...

U.S. COEXCELL developed the N55FPS with the environment in mind. With the proper handling, this long-lasting packaging system can be reused indefinitely. That's a major source reduction for our environment signaling environmental stewardship. And, the plastic material is 100% recyclable.

AFFORDABILITY...The N55 Packaging System will save you money starting with your first order. Because the drums and pallets are so durable, you will enjoy many trips reducing your packaging costs dramatically. The N55 Packaging System investment can be capitalized and depreciated over the useful life of the system. Think of it as a Cycle of Savings!

U.S.COEXCELL IS THE RIGHT CHOICE!
