

LOCK INTO THE N55 PALLET

N55 PALLET Sends Food Shipping and Storage To A New Level

U.S. COEXCELL's newest innovation, the N55 Pallet optimizes storage and handling in the food packaging industry. Designed specifically to fit the N55 Drum, the N55 Pallet provides added balance and stability during shipping. The unique design not only allows N55 drums to nest neatly in the pallet, but also allow for steady stacking of up to four full pallets.

The N55 Pallet's plastic construction provides added strength and doesn't crack or break under pressure. Less permeable to bacteria than wood pallets, the plastic material provides not only increased durability but also safety. Ideal for a food-processing environment, the N55 Pallet is formed out of an FDA Compliant HDPE resin and is the perfect accompaniment to the N55 drum.

VALUE ADDED BENEFITS:

- Plastic construction extends the product's life and number of uses
- Wide forklift openings provide the optimum distance for trouble-free moving and transport of the pallets
- Built-in weep-holes allow for water drainage as frozen product thaws and prevent the accumulation of water when drums are stored outdoors
- When not in use, pallets interlock and nest inside each other and save up to 40% in warehouse space
- 50% lighter than wood pallets, the N55 improves efficiency and saves on labor
- Decreasing the amount of warehouse traffic, the pallets nest securely in one another and are easily handled with conventional equipment

PRODUCT SPECIFICATIONS

Dimensions:	48" x 48" / 123 x 123cm
Pallet height:	10.7" / 27cm
Nesting height per pallet:	approx. +2" / +5cm
Forklift openings:	6.28 x 4.70" / 16 x 12cm
Center dividing wall:	17.72" / 45cm
Stacked Drum and Pallet height:	43.75" / 111cm
Color:	Black (Other colors available upon special request)

FURTHER INFORMATION

Approximately 1,248 empty, nested pallets can fill a standard 53' trailer.

Approximately 748 empty, nested pallets fill a 40' high storage cube container.
