

ENTER THE CYCLE OF SAVINGS

COEXCELL

An Employee Owned Company

STRONG. SENSIBLE. SUSTAINABLE.

That's COEXCELL™'s **N55 REUSABLE** and **RECYCLABLE**
Drum For The Food Processing Industry

The N55: Leading The Way Through Innovation

When COEXCELL™ was developing the N55, we consulted several leading members of the Florida citrus industry – people who are experts on the complexities of shipping and storage of food products. The result? A truly innovative container design that is re-shaping the way food industry people do business

N55 Drum Reshaping Food Shipping And Storage

For more than 10 years, COEXCELL's N55 Drum has been the safe and economical choice for the shipping and storage of food products. With the N55 Drum, COEXCELL remains focused on superior quality and outstanding performance, offering exceptional value to you and customers you serve.

Created from virgin HDPE material, the N55 open head drum is certified for a wide variety of food grade applications. The N55 offers safe, hygienic packaging for food processing and storage. The drum's lightweight, conical design conveniently allows them to stack for increased warehouse efficiency and space. Preventing corrosion and denting, the plastic construction also allows for outside storage and additional space savings. With a virtually unlimited product life, your savings begin with your first N55 Drum purchase.

The Anatomy Of Innovation

N55 SPECIFICATIONS

Body Height:	37.5" (95.3cm)
Top diameter:	23.2" (58.9cm)
De-nesting height:	7.4" (19cm)
Min Wall Thickness:	.125" (.32cm)
Total weight:	17 lbs (± .5lbs) / (7.70 kg (± .23 kg)
Max Capacity:	55 gal (208 liters)
Color:	Black (Other colors available upon special request)

Broad temperature operating range:

-40°F to 140°F (-40°C to 60°C)

Deflection point:

149°F to 160°F (65°C to 71°C)

Further Information

Approximately 828 nested Drums including lids and lock bands fill a standard 53' trailer

Approximately 536 nested Drums including lids and lock bands fill a 40' high storage cube container.

VALUE ADDED BENEFITS:

- Molded-in strapping channel allows proper restraint while the drum is on the pallet and during shipments
- Lighter weight – about half as heavy as steel drums – and more protective
- Consistent container and lid dimensions eliminates costly and laborious "sorting" of steel drums
- Body sidewall contains pigment and UV stabilizers to offer maximum protection from the sun
- A long life cycle which means the N55 will outlast and endure many more trips than a steel drum
- Designed to be easily handled with conventional drum handling equipment
- Consistent container dimensions which eliminates "sorting" of steel drums
- Conical shape allows for easier frozen product release.

Space-Saving Nestability

The N55 not only saves you time and money, it also saves you precious warehousing or storage space. Your pre-fill drum staging space is reduced by almost 67%! For example, six nested N55 drums take up 24 cubic feet of space. Six steel drums take up 72 cubic feet of space!

- Fewer warehouse personnel can unload palletized N55 drums in a fraction of the time required to unload individual, straight sided steel drums.
